

Visualise raster data with leaflet

Visualise raster data
with leaflet

{leaflet} and raster GIS

The {leaflet} package can natively visualise {raster} datasets.

However, you'll need to use the {leafem} package to visualise {stars} datasets.

Categorical legends for raster GIS in {leaflet}

Because raster GIS objects contain numeric values we need to put some coding effort into creating categorical legends.

e.g when we extract values from a raster they are always numeric:

```
unique(values(alaska_landuse))
```
